We have many various specializations of courses “information and computer science” at universities, “information science and econometrics” at universities of economics and “computer engineering” at universities of technology. The specialization “management information systems” at the Electrical and Computer Engineering Faculty of the Rzeszow University of Technology is presented in the paper. The course of an information system as a set of interrelated components that collect, process, store, and distribute information to support decision making and control in an organization is proposed for intramural, extra-mural and postgraduate students.
